

Standaardlijst van plantengemeenschappen in Nederland

Februari 2017

De standaardlijst wordt gepubliceerd in Schaminée et al. 2017, *Stratiotes* 50/51.

Vet gedrukt zijn de gemeenschappen die voor de revisie zijn bewerkt. Nog niet opgenomen zijn de mossen- en kortsmosgemeenschappen waarvan een overzicht in 2017 wordt verwacht (Van Dort et al. 2017, KNNV Uitgeverij).

De namen van de subassociaties zijn bij tweeledige associatienamen omwille van de leesbaarheid verkort door epitheta (in het tweede deel van de naam) weg te laten. Zo dus *Lemno-Spirodeletum typicum* en *Lemno-Spirodeletum azolletosum caroliniana* in plaats van *Lemno-Spirodeletum polyrhizae typicum* en *Lemno-Spirodeletum polyrhizae azolletosum caroliniana*. Bij enkele namen waar het epitheton wel noodzakelijk lijkt is het gehandhaafd, zoals in het geval van *Najadatum marinae zannichellietosum* en *Najadatum marinae nitellopsidetosum*.
